

This month...

An Introduction to PERMACULTURE

"Permaculture works with nature to make a better world for all. By observing the natural world we can see a set of principles at work. Permaculture design uses these principles to develop integrated systems that provide for our needs of food, shelter, energy and community in ways that are healthy and efficient. We can use permaculture design methods to improve the quality and productivity of our individual lives, our society and our environment."

*Taken from the Permaculture Association website - <http://www.permaculture.org.uk>

Permaculture is sustainable land use design based on ecological and biological principles. It often uses patterns that occur in nature to maximise effect and minimise work.

Permaculture aims to create stable, productive systems that provide for human needs, harmoniously integrating the land with its inhabitants.

But perhaps the most important thing about Permaculture is...
...it's a whole lotta fun!!!

Learn how YOU can grow MORE in a SMALLER space by doing much LESS work.
